About F-Secure Corporation

F-Secure Corporation protects consumers and businesses against computer viruses and other threats from the Internet and mobile networks. We want to be the most reliable provider of security services in the market. One way to demonstrate this is the speed of our response. According to independent studies in 2004, 2005 and 2006 our response time to new threats is significantly faster than our major competitors. Our award-winning solutions are available for workstations, gateways, servers and mobile phones. They include antivirus and desktop firewall with intrusion prevention, antispyware and antispam solutions.

Founded in 1988, F-Secure has been listed on the Helsinki Exchanges since 1999, and has been consistently growing faster than all its publicly listed competitors. F-Secure headquarters are in Helsinki, Finland, and we have regional offices around the world. F-Secure protection is also available as a service through major ISPs, such as Deutsche Telekom, France Telecom, PCCW and Charter Communications. F-Secure is the global market leader in mobile phone protection provided through mobile operators, such as T-Mobile and Swisscom and mobile handset manufacturers such as Nokia. The latest real-time virus threat scenario news are available at the F-Secure Data Security Lab weblog at <http://www.f-secure.com/weblog/>

BE SURE. A necessity with today's threats.

Today, the development of IT threats is driven by organized criminals. Instead of seeking publicity, they have become very sophisticated in hiding their very targeted attacks, making it difficult for traditional antivirus solutions to detect the intrusions. The unique technologies in F-Secure's solutions see beneath the surface and protect you against these new types of attacks. You can be sure that you are protected even against new, unknown threats.

Redefining Reliability

During the past fifteen years, we've gained our reputation for reliability by protecting large enterprises and government bodies against viruses, worms and hackers. Now, this proven technology has been adapted for smaller businesses and home computers. However, at F-Secure, reliability extends well beyond advanced technology.

Reliable protection, whether for home computers or complex corporate networks, is about people and services, not just technology. Reliability means researchers that are one step ahead of the next threat, and able to provide fast response to new viruses. It also means developing proactive technology that is so easy to use and manage that protection is almost invisible.

With F-Secure, you do not subscribe only to a software package, but also to people and services with a track record of reliability.

Going Deeper

Today's hidden and targeted attacks are making traditional antivirus solutions less effective. Instead of just analyzing files, the security solution needs to monitor the system more persistently. It should also be able to analyze programs during execution. This is exactly what F-Secure® DeepGuard™ does. It can block attacks even before a new threat is detected by any antivirus lab, and it also warns the F-Secure Security Lab about emerging threats. This functionality is now a standard feature in F-Secure desktop solutions.

24/7 Virus Research

Antivirus products are only as good as the ongoing research that is behind them. The F-Secure Anti-Virus Research Team is on call 24 hours a day, responding to new and emerging threats. The research team is staffed with globally recognized virus experts, who develop and distribute protection against new viruses, often well in advance of other antivirus vendors.

F-Secure Firsts

2006

- F-Secure first to offer full protection for Symbian S60 3rd edition smartphones.

2005

- The first antivirus company to release rootkit detection technology.
- Combined LAN/WAN and Internet Quarantine to ensure protection for both office and roaming users.

2004

- The first mobile antivirus solution distributed with a mobile phone manufacturer.
- The first mobile antivirus service available through a mobile operator.

2003

- The first to offer hosted security services with wireless connectivity and SMS updates.
- The first content security solution for wireless download systems.

2002

- The first antivirus product for a mobile phone on the Nokia Communicator product family.
- The first over-the-air updated antivirus product.

2001

- The first instant security alert service notifying pagers, PDAs, mobile phones, etc.
- The first service provider platform for device based antivirus and firewall services.
- The first real-time antivirus on a PDA platform.

1991 - 2000

- The first heuristic virus scanner of Windows executables and the first integrated, policy managed security solution in 1998.
- The first antivirus product with multiple virus scanning engines and the first proactive macro virus technology in 1997.
- The first on-access, real-time antivirus product for Windows desktops and laptops in 1995.
- The first web based virus information center with a comprehensive virus encyclopedia in 1994.
- The first centrally managed antivirus solution in 1993.
- The first heuristic scanner for antivirus products in 1991.

Award-Winning Software

F-Secure products have consistently won awards including Virus Bulletin 100% and Checkmark awards. The products have also received many recommendations in leading industry magazines.

F-Secure Solutions

F-Secure solutions are the easiest to use and the most effective solution against viruses, worms and trojans, as well as against hackers, unauthorized intrusion attempt, spyware and spam. F-Secure solutions cover virus protection for handheld devices, desktops, laptops, file servers, e-mail servers and gateways.

Home Computing

For home users and small offices that require easy, stand-alone antivirus and personal firewall solutions for Microsoft Windows based desktop and laptop computers.

Peace of Mind

You can surf the Internet, open e-mail attachments and use your computer without fear of virus infections. You can also be sure that you are not sending viruses to others.

Virus Protection

With F-Secure Anti-Virus, viruses, worms, spyware and rootkit attacking via e-mail, web, floppy disks and CD-ROMs are stopped in real-time.

Personal Security

You can use the Internet without fearing that hackers might steal your passwords and other private information. In addition, your computer cannot be misused for illegal operations, such as web attacks and distribution of spam e-mail.

Intrusion Prevention

In addition to viruses, F-Secure Internet Security protects you against zero-day attacks, modern network worms, hackers and trojans when you are connected to the Internet.

Ease of Installation

Installation of the products is fast and simple. You do not need previous experience with software installations to be able to install the programs in only a few minutes.

Transparency

After installation, the programs work transparently in the background. Just install and forget!

Businesses

For companies that require an easy and centrally managed antivirus, antispymware, antispam and intrusion prevention solution for desktops, laptops and network servers as well as for gateways.

Focus on Your Business

You can focus on your business and productivity instead of spending time on keeping your security updated.

No Hidden Costs

There are no hidden costs, such as end-user training, purchase of extra hardware or third party software licenses. The solution runs on your existing IT infrastructure.

Ensure Business Continuity

You ensure your business continuity and save money when you avoid costly network downtime caused by viruses and you also avoid time-consuming legal consequences as the program prevents viruses from sending confidential documents to outsiders.

Grows with your Business

The solution scales with your business in a convenient and economic manner. From a centralized location, you can add new computers or even entire remote offices to your antivirus protection.

Automated Adaptive Protection

F-Secure solutions adapt protection to the way in which people behave, rather than expecting people to adapt to the way in which technology works.

Control

The administrator is in control of company security with an easy-to-use and free management tool. The end-user cannot bypass this security setting.

Automatic Reports

The administrator can easily create reports on security alerts and network status with the web-based reporting tool.

F-Secure Solutions are...

Fast. F-Secure is one of the fastest antivirus vendors to deliver protection to your computer when a new virus breaks out.

Designed to fulfill your needs. F-Secure keeps your IT safe by combining all necessary security components for current and future threats. Thanks to advanced technologies, such as F-Secure DeepGuard, F-Secure protection goes beyond traditional defenses by detecting invisible, targeted threats.

Automatic. F-Secure is the only vendor to provide secure updates automatically and transparently multiple times per day with minimal bandwidth use.

Appraised. Numerous product comparisons and awards, such as VB100% and Checkmark Level 1&2 prove that F-Secure Anti-Virus is one of the most effective antivirus solutions on the market.

Easy to use. F-Secure solutions are easy to install and use; no special computing skills are needed.

Powerful. F-Secure solutions are one of the few antivirus programs with multiple scanning engines, each specialized in different types of viruses. Previously unknown threats are detected with heuristic techniques and behavioral analyses of running programs.

Delivered with care. F-Secure offers you a wide variety of professional services from training to consultation. By default, F-Secure Anti-Virus licenses include free virus definition updates, program upgrades and technical support for one year.

Adaptive. F-Secure solutions for laptops can automatically adjust the security level based on network connection. This ensures the best possible protection no matter where the remote user connects to the network.

F-Secure Internet Security 2007

F-Secure® Internet Security™ 2007 provides complete and easy-to-use protection against all Internet threats, whether they are known or previously unidentified.

Safety on the Internet

F-Secure Internet Security allows you to surf the Internet and open e-mail attachments safely. You can also use your computer without fear of virus infections or hackers. Just install and forget, F-Secure Internet Security will automatically guarantee safe surfing for you and your family!

Best Protection

The superior technology in F-Secure Internet Security includes an award-winning antivirus, a pre-configured firewall and an improved antispyware. It also includes a new technology, F-Secure DeepGuard, that constantly monitors the very heart of your computer, making sure that no malicious programs can take over. In addition, the product filters unwanted spam and so-called phishing attempts from your e-mail. And with the parental control, you can block access to websites that have questionable content.

Simplicity and Ease of Use

Automates all the key tasks required to keep your computer and data safe. Taking just minutes to install, it is constantly working in the background to protect you and your data. You do not need to be an expert in information technology to be able to professionally protect your computer.

F-Secure Anti-Virus 2007

F-Secure® Anti-Virus™ 2007 provides the best protection for your home PC against viruses, worms, spyware and unknown attacks. It is highly automated and extremely easy-to-use.

Keep Viruses Away

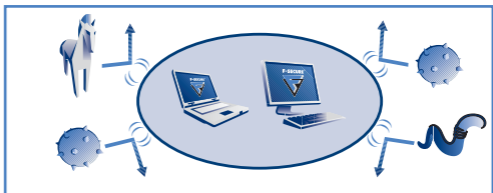

Allows you to safely open e-mail attachments and use your computer without fear of virus infections or malicious programs that can take over your computer. You can also be sure that you are not sending viruses to others. Just install and forget, F-Secure Anti-Virus will automatically keep viruses and unknown threats away from your computer.

Simplicity and Ease of Use

Automates all the key tasks required to keep your computer and data safe. Taking just minutes to install, it is constantly working in the background to protect you and your data. You do not need to be an expert in information technology to be able to professionally protect your computer.

The Fastest Protection against New Virus Outbreaks

F-Secure virus research team operates 24 hours a day to make sure it is always among the first to deliver protection against new viruses. This is why your F-Secure Anti-Virus is always up to date.

F-Secure Client Security

F-Secure® Client Security™ 7 provides centrally managed threat protection for corporate workstations. The solution defends computers against traditional and new zero-day threats by integrating antivirus, firewall, antispymware, rootkit scanning and behaviour-monitoring (HIPS).

Real-Time Virus and Spyware Protection

Stops viruses, spyware and other malicious code attacking via e-mail, the web, floppy disks and CD-ROMs in real-time. The scanning of HTTP, POP3, IMAP and SMTP mail traffic ensures that no viruses are sent out or received through e-mail.

Zero-day Threat Protection

Centrally managed F-Secure BlackLight™, a rootkit scanner, and F-Secure DeepGuard, a Host-Based Intrusion Prevention System (HIPS), protect workstations against unknown and hidden malware. F-Secure DeepGuard uniquely combines heuristics, sandboxing and behaviour-blocking.

Integrated Desktop Firewall

Provides robust monitoring and filtering of Internet traffic preventing unauthorized access to the workstations over the network and hides the workstations from Internet hackers and network worms.

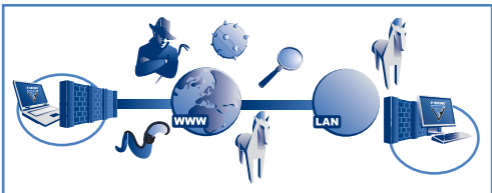

Intrusion Prevention

Analyzes Internet traffic and automatically detects and blocks suspicious network traffic such as port scans and network worms.

Combined LAN/WAN and Internet Quarantine

Assures healthy security level for workstations and laptops connecting to office LAN or Internet.

Available in 18 different languages (please see F-Secure Anti-Virus for Workstations).

F-Secure Anti-Virus for Workstations and for File Servers

F-Secure® Anti-Virus™ for Workstations provides centrally managed antivirus and antispyware protection for corporate laptops and desktops. It stops viruses from entering and spreading in the corporate network via employees' computers.

F-Secure® Anti-Virus™ for File Servers ensures that employees who connect with infected machines to corporate file servers do not spread viruses in the network. It also scans the system for hidden rootkits.

Real-Time Automatic Protection

Stops viruses, worms and trojans attacking via e-mail, web, floppy disks and CD-ROMs in real-time. It also scans the content of compressed files such as ZIP files.

Centralized Management

Can be remotely installed, deployed, configured and monitored with F-Secure Policy Manager from one central location.

Available in Several Languages

Chinese (server), Czech, Danish, Dutch, English, Finnish, French, German, Greek, Hungarian, Italian, Japanese, Norwegian, Polish, Portuguese, Brazilian Portuguese, Slovenian, Spanish, Swedish and Turkish.

Wide Platform Support

For protection of Linux desktops and file servers, please see F-Secure Linux Client and Server Security.

F-Secure Anti-Virus Enterprise Suite

F-Secure® Anti-Virus™ Enterprise Suite offers everything needed for larger businesses and corporations to protect workstations, laptops, servers and gateways for viruses, trojans, spam, worms, spyware and network intrusion:

F-Secure Anti-Virus

- > for Workstations
- > for Windows File Servers
- > for MS Exchange
- > for Citrix Servers
- > for MIMESweeper

F-Secure Linux Security Platform

F-Secure Client Security

F-Secure Linux Client and Server Security

F-Secure Internet Gatekeeper for Linux

F-Secure Internet Gatekeeper for Windows

F-Secure Spam Control for MS Exchange

F-Secure Spam Control for Internet Gatekeeper

F-Secure Policy Manager

Proactive Protection Against Unknown Threats

Advanced technologies like F-Secure DeepGuard and F-Secure Blacklight provide centrally managed protection for corporate workstations against both traditional and new, unknown zero-day threats.

Automatic Virus and Spyware Definition Updates

The virus definition databases are updated daily with minimal bandwidth to stay one step ahead of new threats without administrator intervention.

F-Secure Anti-Virus Corporate Suite

F-Secure® Anti-Virus™ Corporate Suite combines all the critical antivirus components required for corporate security providing protection for laptops, desktops, file servers, e-mail servers and gateways:

F-Secure Anti-Virus

- > for Workstations
- > for File Servers
- > for Microsoft Exchange
- > for Citrix Servers
- > for MIMESweeper

F-Secure Client Security

F-Secure Linux Server Security

F-Secure Internet Gatekeeper for Windows

F-Secure Policy Manager

An All-in-One Cost Efficient Solution

Incorporates an enterprise-wide, cost efficient solution that provides you with everything you need to fully secure your corporate network.

Centralized Management

All the Windows based products included in the suite can be remotely installed, configured and monitored with one single management system – F-Secure Policy Manager. All F-Secure Anti-Virus licenses entitle you to use F-Secure Policy Manager free of charge.

F-Secure Anti-Virus Small Business Suite

F-Secure® Anti-Virus™ Small Business Suite is designed for small and medium sized businesses. It includes all needed components to protect a company's desktops and laptops as well as file and e-mail servers.

Desktop Protection

F-Secure Client Security provides centrally managed protection for corporate workstations by combining robust signature-based protection with advanced behaviour-monitoring. These prevent both global and local malware epidemics and intrusions.

File Server Protection

F-Secure Anti-Virus for File Servers ensures that employees who connect with infected machines to corporate file servers do not spread viruses in the network.

Microsoft Exchange Protection

F-Secure Anti-Virus for Microsoft Exchange protects Microsoft Exchange environments by removing viruses, worms and trojans hidden in e-mail attachments, and documents in public folders.

Centralized Management

With F-Secure Policy Manager an IT administrator can install, configure, update, upgrade and monitor all the corporate anti-virus and security solutions from one single location.

F-Secure Policy Manager

With F-Secure® Policy Manager™ – a free security management system – an IT administrator can install, configure, update, upgrade and monitor all the corporate antivirus and security solutions from one single location.

Centralized Management

Enforces corporate security policies and ensures that the end-users cannot bypass the protection.

Powerful Policy-based Management

Ensures short reaction times on emerging security threats. Security policies can be changed and distributed to the entire organization in minutes.

Ease of Use and Deployment

Features the easiest security management system available on the market; getting it up and running takes only a few minutes.

Low Total Cost of Ownership

Delivers ongoing cost savings. For instance, there is no need to physically visit remote offices, nor is additional hardware or software needed.

Extensive Reporting

Generates comprehensive, customizable, web-based reports for monitoring the status of the entire managed network.

Supported Languages

English, French, German, Japanese

F-Secure Internet Gatekeeper

F-Secure® Internet Gatekeeper™ is a high-performance and fully automated antivirus and content filtering solution for protecting corporate e-mail and web traffic at the Internet gateway. See also F-Secure Internet Gatekeeper for Linux.

Virus Protection for E-mail and Web Traffic

Automatically stops viruses and other malicious code hidden in SMTP, HTTP and FTP over HTTP traffic. As a standalone proxy it interoperates with any firewall and e-mail system.

Content Filtering

Protects against viruses and undesired file types by securely stripping attachments based on file size, type or name.

Zero Day Protection

Zero-hour antivirus protection uses behaviour-monitoring to prevent unknown malware that spreads quickly through e-mail. It also offers protection against malware before traditional signatures have been published.

Local or Remote User Interface

Provides an easy-to-use Web user interface for managing the product either locally or from a remote location. Alternatively, the centralized management tool F-Secure Policy Manager can be used to administer all F-Secure Anti-Virus products.

Spam Control Option

F-Secure Spam Control filters annoying spam messages from the user's inbox transparently and frees time for productive work. The component can be purchased separately.

F-Secure Anti-Virus for Microsoft Exchange

F-Secure® Anti-Virus™ for Microsoft Exchange protects Microsoft Exchange environments by removing viruses, worms and trojans hidden in e-mail attachments, and documents in public folders.

Several Scanning Options

Supports real-time, manual and scheduled scanning of mailboxes and public folders as well as full and incremental scanning.

Attachment and Message Filtering

Protects against fast spreading viruses, worms and trojans by enabling filtering based on key words in messages and file name, size and type in attachments.

Outbreak Management

Enables fast responses to virus outbreaks. The product notifies the administrator when the number of infections exceeds a certain level in a given time period.

High Availability

Support for Microsoft Windows Active-Active clusters prevents operational disruptions with automatic connection to the backup server if the primary scanning server becomes unavailable.

Zero Day Protection

Zero-hour antivirus protection uses behaviour-monitoring to prevent unknown malware that spreads quickly through e-mail. It also offers protection against malware before traditional signatures have been published.

Spam Control Option

F-Secure Spam Control filters annoying spam messages from the user's inbox transparently and frees time for productive work. The component can be separately purchased.

F-Secure Spam Control

F-Secure® Spam Control™ filters annoying spam messages from the user's inbox transparently and frees time for productive work.

Multiple Filter Mechanisms

Detects spam based on rules and different analyses of the e-mail content. Multiple filter mechanisms of the e-mail content ensure high accuracy detection.

Heuristics Rules Technology

Monitors, evaluates and identifies suspicious e-mail traffic based on typical spam profiles. As the filtering does not only rely on blacklists or sender information, it is precise.

Automatic updates

Runs and updates automatically on the background. The spam detection update files are delivered frequently in order to keep the detection rate high and accurate.

Flexible Management

Allows the administrator to specify the sensitivity level of spam filtering with ease. As a result, the spam can be dropped already at the server. Alternatively, it can be filtered at the client level.

Centralized or Local Administration

Enables centralized management with F-Secure Policy Manager or local administration with standalone user interface.

Blacklisting and Whitelisting

Support for DNS Blackhole Lists and black- and whitelisting.

F-Secure Anti-Virus for MIMESweeper

F-Secure® Anti-Virus™ for MIMESweeper stops viruses, worms and trojans together with your MIMESweeper product, providing your corporation with a powerful solution for complete content security.

Seamless Integration

Supports the Content Scanner Scenario interface of Clearswift's MAILsweeper product ensuring easy installation and the highest possible scanning performance.

Superior Performance

Eliminates the need to queue content through a command line scanner; scans multiple messages simultaneously providing high performance.

Integrated Management

Enables easy management with the MIMESweeper management system or F-Secure Policy Manager.

Supported MIMESweeper Products

Supports MAILsweeper for SMTP and MIMESweeper for Web.

Available in Several Languages

Chinese, Czech, English, Finnish, French, German, Greek, Hungarian, Italian, Japanese, Korean, Spanish and Swedish.

F-Secure Anti-Virus for Citrix Servers

F-Secure® Anti-Virus™ for Citrix Servers is designed to protect corporations using Citrix MetaFrame servers and Microsoft Terminal Servers against viruses and other malicious contents.

Always-on protection

Prevents remote users to infect the whole server farm. The protection is always-on and up-to-date.

Low-cost administration

Provides easy-to-use and low-cost administration through central management and automated updates.

Increased Productivity

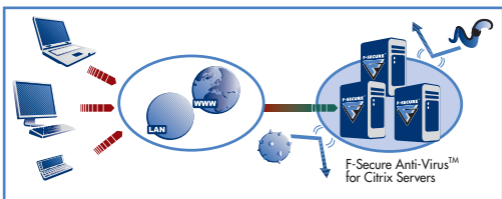

Enables businesses to improve their productivity by providing easy access to information and application regardless of time, place and access device.

Improved Performance

File indexes are cached so only the changed files are scanned to improve performance.

Increased Security

Ensures business continuity without disruptions caused by viruses and other malicious contents.

F-Secure Messaging Security Gateway

F-Secure® Messaging Security Gateway™ delivers the industry's most complete and effective security for e-mail. It combines a robust, enterprise-class messaging platform with perimeter security, antispam, antivirus and zero-hour protection capabilities in an easy-to-deploy, hardened appliance. Now also available as Virtual Appliance.

Perimeter Security

The integrated E-mail Firewall provides complete perimeter security, defending against denial-of-service, directory harvest and other forms of network-based attacks. The unique machine learning and SMTP traffic control features constantly monitor connections at the IP address level, looking for malicious activity.

Virus Protection

F-Secure's award winning antivirus technology provides the industry's most accurate protection against viruses. In antivirus, where speed is of utmost importance, F-Secure maintains record response times and sets the pace of development.

Spam Detection

Unrivalled protection from spam and phishing attacks is ensured by advanced machine learning technology, which analyzes more than 200,000 structural and content attributes in every message to accurately identify unwanted e-mail.

Benefiting from virtualisation

The solution is also available as a pre-built virtual machine for companies using the VMware environment. Virtual Appliance lets you get the full benefit of virtualization also in messaging security.

Ease of Installation and Use

A small-enterprise optimized administration interface and "plug and play" setup wizards that enable installation in just minutes and minimize ongoing maintenance requirements.

F-Secure Linux Client and Server Security

F-Secure® Linux Client and Server Security™ is an integrated, out-of-the-box ready security solution with strong real-time antivirus protection and Host Intrusion Prevention functionality that provides protection against unauthorized connection attempts from network, unauthorized system modifications and rootkits.

Protection Against Malware (*including Riskware and Spyware)

Transparent real-time protection against malware as files are opened, copied, and downloaded from the web. *Server Security protects also against Riskware and Spyware. Virus definition databases are signed by F-Secure and updated automatically.

Centralized Management of Local Firewall Rules

Protects the host against unauthorized connection attempts with predefined security profiles tailored for common use cases.

Protection Against Unauthorized System Modifications

Integrity checking prevents and alerts the administrator on file changes that originate internally, or from external intrusion, malicious tampering or accidents.

Protection Against Rootkits

Detects, prevents and alerts the administrator on user space or kernel rootkit installation attempts.

E-mail Scanning

Support for scanning messaging content in established system using third party solutions like Mailscanner or AmaViS (or similar).

Centralized Management

With F-Secure Policy Manager administrator can remotely manage both Linux and Windows workstation security.

Easy to use

Easy-to-use product and effective protection combining all the important security features in graphical local user interface.

F-Secure Internet Gatekeeper for Linux

F-Secure® Internet Gatekeeper for Linux™ is a high-performance fully automated antivirus and content filtering solution for protecting corporate e-mail and web traffic at the Internet gateway.

Virus Protection for E-mail and Web Traffic

Automatically stops viruses and other malicious content hidden in SMTP, HTTP, POP3 and FTP.

Transparent Proxy

Product can be installed as a transparent HTTP proxy server acting as a gateway between the corporate network and the Internet.

E-mail Scanning

Scans malware in incoming and outgoing e-mails. Blocks or quarantines e-mail messages and sends a customizable notification message. Can also block e-mails having scripts, ActiveX or specified files or extensions as attachments.

Access Control

Allows you to prevent employees from visiting non-work related web sites or sending private e-mail via free e-mail messaging services on the web.

Spam Control

Filters spam for both SMTP and POP services with RTBL (Real Time Blacklists) and SURBL (Spam URL Real Time Block Lists). Easily configurable custom rules can be used to e.g. whitelist known legitimate e-mail.

Easy to Administer

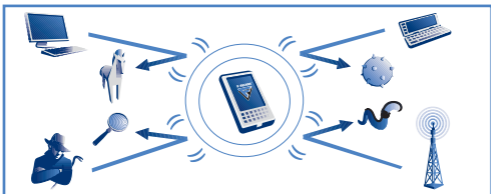

Provides an easy-to-use web user interface for managing the product either locally or from a remote location.

F-Secure Mobile Security

Protect your personal data on your smartphone, wherever you go.

Stop all types of smartphone threats from Bluetooth viruses to MMS worms by using F-Secure's mobile solutions. With F-Secure Mobile Anti-Virus, you can e-mail, browse the web or use Bluetooth devices without fear of viruses, worms or trojans. When an infected file is detected, it is immediately quarantined to protect all other data in the system. F-Secure® Mobile Security™ adds a firewall for supported devices to the award-winning anti-virus, stopping all intrusion attempts.

- > Stops all types of malware from Bluetooth viruses to MMS worms.
- > Intelligent proactive detection stops most viruses without the need for antivirus updates.
- > Monitors all potential virus entry points.
- > Automatic over-the-air antivirus updates from the F-Secure Security Labs when a new threat is detected.
- > Includes firewall (F-Secure Mobile Security) for selected devices to protect against Wi-Fi intrusion attempts.
- > Supports both Symbian and Windows Mobile.

F-Secure Mobile Anti-Virus for Businesses

F-Secure® Mobile Anti-Virus™ for Businesses is the easiest and the most efficient way for corporations to get the required protection for mobile phones. The real-time antivirus protection and automatic updates directly to the mobile device over a wireless connection makes it the most comprehensive solution on the market for companies of any size.

Centralized Portal for Status Monitoring and Antivirus Subscription Service

Using F-Secure Mobile Services portal the company IT administrator can easily see the protection and wireless antivirus service status of the company's smartphones.

Transparent, Real-Time Protection Against Viruses, Worms and Trojans

Stops automatically in real-time viruses and malicious code attacking via PC synchronization, file exchange with another device, WAP/MMS or direct Internet download. When an infected file is detected, it is immediately quarantined to protect all other data in the system.

Integrated Firewall

Integrated firewall safeguards the mobile device with WLAN connectivity from any type of attack, from intrusion attempts to malware.

Automated Virus Definition Updates

Automatic virus definition updates from F-Secure Data Security Lab to the smartphones over an HTTPS data connection, or incrementally with SMS updates.

F-Secure Services

F-Secure offers a wide selection of services that help you to make the best of your investment in F-Secure solutions. With F-Secure's appraised expertise in data security and virus protection, you ensure your system is always properly protected.

Standard Support

Standard support provides you with easy access to our experienced technical support staff during local business hours via Internet, e-mail and phone – whichever is the easiest way for you.

Premium Support

Premium support ensures that you enjoy the highest priority telephone service 24/7 and access to personalized and proactive support services.

Maintenance

Maintenance services provide you with daily virus definition updates and product upgrades via web or on CD-ROM.

Product Training

F-Secure provides high quality technical product training worldwide. Contact your local F-Secure office or F-Secure Certified Training Partner to get more information on the courses and schedules.

Instant Virus Alerts

The sooner you are alerted about potential virus outbreaks, the better you can protect your network against them. F-Secure Radar™ delivers you instant notifications of serious security events around the world through a variety of media. F-Secure Radar is offered as a personal one-year service subscription.

Note: Upon purchase of F-Secure Anti-Virus licenses, you are entitled to free virus definition updates, program upgrades and standard support for one year. For other F-Secure products, the services can be purchased separately.
